## OPPORTUNITY TO ENHANCE YOUR CARE COORDINATION ACTIVITIES

Provider Delivered Care Management (PDCM) builds upon the Patient Centered Medical Home (PCMH) in transforming care delivery and enabling physicians to deliver coordinated team-based care.

The program allows physician-led health care teams to provide services that are billed by qualified practitioners.

BCBSM recently announced that Medical Assistants and Community Health Workers can now provide certain care management and care coordination services; however, specific training and documentation requirements must be met.
